

# ABC-S Plus

## type IV de-/anti-icing fluid

Kilfrost ABC-S Plus is a Type IV de-/anti-icing fluid that is qualified to AMS 1428 and ISO 11078. ABC-S Plus offers all the benefits of the well established ABC-S, but does not contain triazole, bringing the fluid in-line with ever increasing environmental demands.

ABC-S Plus continues to provide maximum holdover against freezing precipitation, especially snow. This product is particularly useful at airports that experience severe weather conditions and/or long taxi times. ABC-S Plus can be used as a cold anti-icing fluid to protect against the build up of frost ice and snow, or applied hot as a one step de-/anti-icing fluid.

In addition to longer holdover times, ABC-S Plus exhibits excellent aerodynamic flow off properties and good dry out characteristics. In common with all Kilfrost ABC products, ABC-S Plus is a robust fluid offering long-term shear/storage stability.

Available for winter season 2007/08, ABC-S Plus is a direct replacement for ABC-S and can be used with existing equipment and procedures. Having very similar properties and being totally miscible with ABC-S in all proportions simplifies the process of fluid changeover.

ABC-S Plus is available in 25 litre drums, 205 litre barrels, 1,000 litre IBCs and bulk tankers. For ordering information and technical assistance regarding this product, please contact a member of our Sales team (+44 (0)1434 321500).

- Triazole free
- Extended Holdover times
- Good shear/storage stability
- Low Residues
- Good sprayability with minimal foaming
- Wide in-service viscosity range
- 3 year shelf life in original unopened containers
- Complies with AMS 1428 / ISO 11078 specifications
- Monopropylene glycol based (MPG)
